

THE CAPITAL GRID PROJECT: TAKOMA SUBSTATION

An Exelon Company

At Pepco, our purpose is delivering safe, reliable, and affordable energy to our customers and communities in the District of Columbia and Maryland. We are committed to managing and maintaining the existing electric system and planning for the future needs of our customers.

The Capital Grid project promotes enhanced reliability and strengthens our system. Since we retired our power plants in the District, nearly all energy is imported from outside the city via radial or point-to-point transmission lines. Four passages of transmission lines are supplying energy to the Capital region, including the District of Columbia, and Prince George's and Montgomery counties. If any of the transmission lines lost power, it could lead to an outage of several days to several weeks.

Aging transmission and substation infrastructure poses risks to the system, and we must protect and strengthen it. That is why we are proposing the Capital Grid project, a major effort that will allow us to better serve our customers in the District and Maryland.

The Capital Grid project is a forward-looking plan that, if approved, will:

- Upgrade three existing substations in Maryland and the District
- Construct one new substation to serve areas projected to see high growth
- Build a new 10-mile underground transmission line to connect the substations and create a networked system through which we deliver electricity to our customers

Solar Energy Capacity for Customers Will Expand

There is growing interest in customer-generated power such as rooftop solar. At Pepco, we continue to support this interest by advancing technologies that empower customers, promote sustainable solutions, and drive a 21st century economy. The project will expand the transmission network, modernize the system, and increase the grid's capacity. Adding capacity will allow the grid to accommodate more customer-generated power in the future.

Capital Grid Project Benefits

The Capital Grid project provides many long-term benefits to our customers across the Capital region.

Enhanced Service

- New infrastructure that will reduce the strain on surrounding areas, improving electric system service

Stronger System

- Enhancements that will lessen the impact and speed recovery from storms and other emergencies

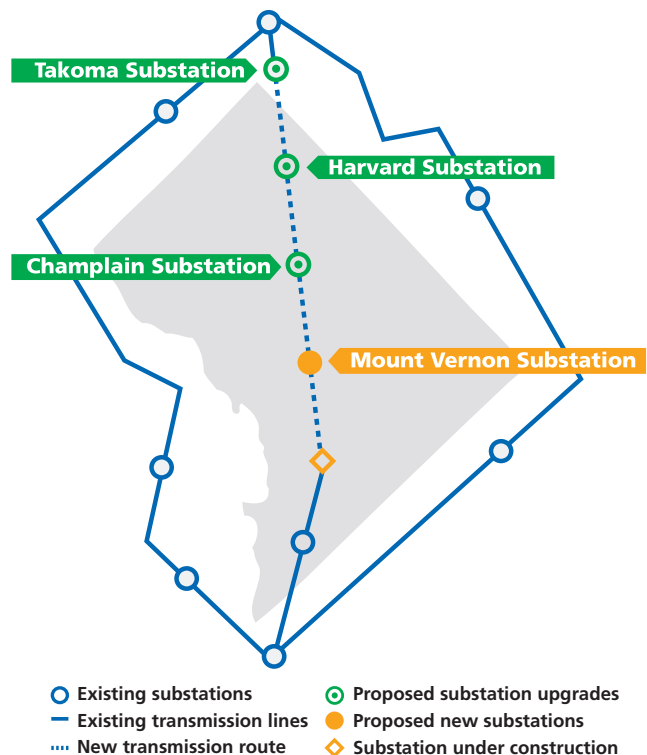

Added Capacity

- A more robust system to handle energy needs, as the District experiences rapid residential and commercial development

Economic Support

- Increased opportunities for minority, women, veteran and disabled local businesses and contractors to support project work as we energize the diverse, local communities where we live and work

The upgraded Takoma Substation will strengthen the electric system in the Capital region and provide opportunities for future enhancements.

Takoma Substation Overview

A substation is a facility that reduces high-voltage electricity to lower voltages, which is ultimately used to provide power to our customers. As a part of the Capital Grid project, the Takoma Substation, location in Prince George’s County, Maryland, will be upgraded to replace aging equipment and infrastructure. This substation was built in 1932, and it has served the area well for over 85 years.

Project work will include:

- Installing high capacity transformers and feeders
- Upgrading the substation structure and equipment to improve performance, aesthetics and reduce the potential for outages
- Connecting the substation to the new networked system

Takoma Substation Schedule

Our proposal must be reviewed by the Public Service Commission of the District of Columbia and the District of Columbia Board of Zoning Adjustment before the project may begin.

Because the Takoma Substation is located in Maryland, we will also need permits from the Prince George’s County, Maryland – National Capital Park and Planning Commission and the Prince George’s County Department of Permitting, Inspection, and Environment. If approved, we expect to start rebuilding and upgrading this substation in 2018, and to complete it by the summer of 2022. We aim to complete the work with as little disruption as possible. We will notify residents and businesses near the project area before work occurs.

Safety is a Top Priority

During all phases of the Takoma Substation upgrade, our highest priority is the safety of our customers, the community, our employees, and the environment. We incorporated safety in the technical design of our equipment, our system, and our building. In addition, the layout of our exterior landscape incorporates security features to protect our system.

We Value Community Participation

We welcome the opportunity to work with residents and business owners to gather public feedback and input. We are committed to keeping customers informed every step of the way through the project webpage, community meetings, and social media. To find a community meeting in your neighborhood, visit www.pepco.com/CapitalGrid.
